

IN THE CLAIMS:

1. (Currently amended) A free drug particulate form of a compound having a formula

and or pharmaceutically acceptable salts and solvates thereof, comprising particles of the compound wherein at least 90% of the particles have a particle size of less than about 40 microns.

2. (Original) The free drug particulate form of claim 1 wherein at least 90% of the particles have a particle size of less than about 25 microns.

3. (Original) The free drug particulate form of claim 1 wherein at least 90% of the particles have a particle size of less than about 15 microns.

4. (Original) The free drug particulate form of claim 1 wherein at least 90% of the particles have a particle size of less than about 10 microns.

5. (Currently amended) A pharmaceutical composition comprising the free drug particulate form ~~of claim 1~~ as in any one of claims 1-4 and one or more pharmaceutically-acceptable carriers, diluents, or excipients.

6. (Original) The pharmaceutical composition of claim 5 wherein the free drug is entirely in particulate form.

7. (Currently amended) A method of treating sexual dysfunction in a patient in need thereof, which comprises administering to the patient a therapeutically effective amount of a composition comprising the free drug particulate form ~~of claim 1~~ as in any one of claims 1-4 and one or more pharmaceutically-acceptable carriers, diluents, or excipients.

8. (Original) The method of claim 7 wherein the sexual dysfunction is male erectile dysfunction.

9. (Original) The method of claim 7 wherein the sexual dysfunction is female sexual arousal disorder.

10.-13. (Cancelled)

14. (Original) A method of manufacturing the free drug particulate form of claim 1 comprising:

- (a) providing a solid, free form of the compound, and
- (b) comminuting the solid free form of the compound to provide particles of the compound wherein at least 90% of the particles have a particle size of less than about 40 microns.

15. (Original) The method of claim 14 further comprising the step of admixing the particles of step (b) with one or more pharmaceutically-acceptable carriers, diluents, or excipients.

16. (Original) A pharmaceutical composition prepared by admixing particles of a compound having a formula

or a pharmaceutically acceptable salt or solvate thereof, with one or more pharmaceutically acceptable carrier, diluent, or excipient, wherein the particles of the compound have a $d_{90}=40$ or less.

17.-22. (Cancelled)
